# Tumor enucleation: a safe treatment alternative for renal cell carcinoma

*Expert Rev. Anticancer Ther.* 11(6), 893–899 (2011)

- Enucleation
  - preserves more normal parenchyma
  - often avoids renal vessel clamping and WI
  - often can be performed for tumors near the hilum or collecting system

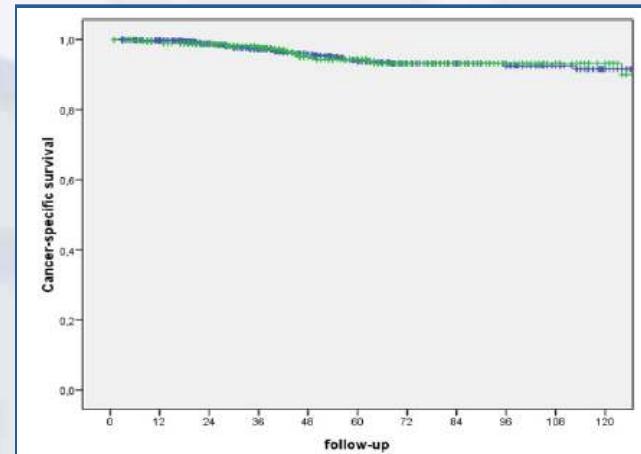

Variable	Value
Clamping of renal pedicle, n (%)	
Pedicle <i>en bloc</i>	169 (84.5)
Artery	16 (8)
Manual compression	3 (1.5)
No clamping	12 (6)

Residual ca	0	2	2	4.5/6	
II rad. (=neph.)	-	2			
Residual ca	-	2			

- There is controversy regarding the safety of renal tumor enucleation owing to histopathologic findings of pseudocapsule tumor invasion: renal tumor bed ablation using the argon beam and the neodymium:yttrium-aluminum-garnet laser may ablate any tumor cells extending beyond the pseudocapsule.

## WUMS EXPERIENCE

### Surgical technique:

#### -**hyium preparation**

-tumor resection was performed using **the electrocautery at 50 watts** or the **Habib-4X bipolar resection device** (Angio Dynamics, Queensbury, NY)

- the depth of the tumor was assessed, and the resection site was marked with the aid of **intraoperative ultrasonography & TilePro feature**

- vessels directly entering the tumor from the resection bed clipped with **Weck Hem-o-lok clips**
